

Model: CCB-20

Technical features

Reference	External dimensions (mm)	N doors	N sliding guides GN 2/1 (distance 60 mm)	Voltage (V)	Power (W)	Description
19006590	783 x 860 x 1640	1	20	230/1/50-60 Hz	2000	-

Packaging dimensions:

Depth: 850,000 MM

Width: 990,000 MM

Height: 1.785,000 MM

Gross weight: 125,000 KG

General features

The short height of the trolley enables easy access to upper shelves and improves overall maneuverability.

The special design of the chamber and rack rails enables the free circulation of hot air through all the trolley, leading to the creation of a uniform airflow distribution, ensuring that food is always maintained at its right temperature.

Two (2) forced-air electric resistors in each cabinet body to ensure that heat is distributed through all the unit in a perfectly even, uniform manner. Safety security mechanism in resistors in case of malfunctioning.

Doubled wall with an injected CFC-free, ecological polyurethane 40 Kg/m3 density isolation.

With its highly-insulated walls, heat losses are reduced thus obtaining energy savings.

Thermostat to control and regulate the temperature at desired setpoint: from 0° to 90° C.

Stamped control panel. Protected from receiving direct impacts since it is located in a safe place.

Durable, robust bumper along whole trolley base to protect body from direct impacts.

Waveless evaporation tray system to control humidity in the chamber and prevent food from drying out.

Sound-proof castors of 160 mm diameter, two of them with brakes for an easy handling and safer use.

Rack rail system that can be quickly removed for easy cleaning.

Up to eight (8) plates of a maximum diameter of 300 mm can be stored per level. That makes a total of 160 plates.

CCB-40 models include a central grid system to optimize the space inside the trolley.

20 central grids are supplied as standard option.

Especially designed for maintaining and serving previously prepared hot food.

Food can be held inside the trolley directly on plates by using of rod shelves or in Gastronorm pans.

10, 20 or 40 GN2/1 rack rails (according to the model) with 60 mm separation between rack rails.

Doubled wall with an injected CFC-free, ecological polyurethane 40 Kg/m3 density isolation. With its highly-insulated walls, heat losses are reduced thus obtaining energy savings.

Heating system by using two (2) forced-air electric resistors in each cabinet body to ensure that heat is distributed through all the unit. The special design of the chamber and rack rails enables the creation of a uniform, even airflow distribution, ensuring that food is always maintained at its right temperature.

Waveless evaporation tray system to control humidity in the chamber and prevent food from drying out.

Thermostat and external thermometer to monitor, control and regulate the temperature at desired setpoint: from 0° to 90° C.

Horizontal handle system for fast opening and closing of door.

Automatic locking mechanism in hinges: when door is in a position of less than a 90° angle it gets fully closed, thus avoiding loss of temperature and achieving energy savings.

Four (4) sound-proof castors of 160 mm diameter, two of them with brakes for an easy handling and safer use. Non-marking, special rubber bumpers to protect against direct impacts along the whole trolley base.

Key locked door.

Entirely made of stainless steel.

Rod shelves and Gastronorm pans are not included. To be ordered separately.
